Dear Valued Customer,

We would like to inform you that the PULSAlink server will be down 01/09/2017 for approximately one half hour 7:00pm – 7:30pm EST for an important security update being applied. Access to controllers will not be available and data will not be uploaded to the PULSAlink server during this time. Please plan accordingly.

It would be advised that the connection to the controller be confirmed to make sure you are able to read the controller after the update. Rebooting the controller may be needed to re-establish connection.

For further questions, contact your system administrator or Pulsafeeder Technical Support at 941-575-3800, ppgspotech@idexcorp.com
